

Exciting opportunities for Radius Systems water pipeline solutions at IFAT

IFAT Munich provided the perfect platform for the Radius Systems group to showcase their comprehensive pipeline solutions for the water and wastewater sectors.

The exhibition, which took place from 14th to 18th May provided a great meeting place for exhibitors and visitors from 160 countries to discuss solutions around water, wastewater and raw material management. This year's key focus was on technologies of the future for a clean environment and the sustainable use of resources, improved recycling of water, waste and plastics.

Radius Systems exhibited their polyethylene water pipe system solutions including Puriton, their innovative barrier pipe system specifically developed for the distribution of potable water through contaminated land. The barrier properties of the pipe system protect the water from the

permeation of contaminants commonly found in brownfield sites. Great interest was also generated by their universal electrofusion fittings solutions, specifically designed for water and gas applications. The state of the art Aeon valves and the Radius Subterra solvent-free Subcote FLP spray lining resin technology, specifically designed for the rehabilitation of drinking water pipelines, also attracted many visitors to the stand.

This year's exhibition has seen a record 141,000 visitors with increased numbers of attendees from Japan, Russia, Australia and China.

For more information on our pipeline components and our pipe rehabilitation technologies and services please visit the Radius Systems website www.radius-systems.com or call us on +44 (0)1773 811112.
